

G+K SteelCon

Although G+K SteelCon was founded in September 2011, it employs a management team with over 25 years of experience in the shipbuilding industry. For this reason, its success depends mainly on expertise. The company's headquarters is located in Świnoujście, Poland. It also has offices and production areas in Szczecin and northern Germany.

The company specializes in the production and assembly of aluminum and steel structures for shipyards, shipbuilding and heavy industry. The company operates in Poland and other EU countries, but its activity is mainly based on cooperation with foreign associates. G+K SteelCon always takes into consideration the classification and environmental protection requirements when executing our clients' orders. In all its undertakings, the company uses many years of work experience and know-how of its partners.

The infrastructure and facilities are located at the shipyard where the company conducts its main operations, which makes it, an ideal choice for watercraft construction as well as services, such as; mechanical and hull repairs, ship repairs, painting and any other survey class requirements. In addition, the company has access to expertise in the field of electrical and hydraulic components and drive systems.

G+K SteelCon Engineering

From the beginning of its activity, G+K SteelCon has focused on the development of its engineering capabilities related to hull construction technology. Initially, G+K SteelCon used the services of various design companies, but over the years, it began to build and develop its own design team to eventually create the G+K SteelCon Engineering department.

G+K SteelCon Engineering focuses on the preparation of good quality workshop and NC documentation, as well as other engineering and technological works in the field of ship hull production. In addition, the G+K SteelCon Engineering department prepares classification documentation and other more advanced technological operations, such as the procedure and technology of hull launching.

From the very beginning, our team of engineers has been developing the design of

new structures and conversions of ships in the local market. In 2013, we started expanding into the German and Scandinavian markets. Since then, it has successfully completed many projects on its own and third-party brands. During this period, the company gained extensive experience in cooperation with other design offices and shipyards, as well as in relations with owners and class societies. It was also that time, that the team developed the skills to use modern technologies and programming solutions used in the ship design market.

The background of the top half of the page is a photograph of several industrial gas cylinders (blue and red) with gauges and hoses, set against a dark, industrial-looking background with a large circular opening. The image has a blue and red color cast.

J&K Alkon

KB Logistik

KB-Logistik is our company in charge for storage and transportation. Thanks to a modern fleet and a competent and motivated team, we focus on uncomplicated processes. Whether partial or full truck load, standard or oversized goods, open or covered, we have numerous solutions at your disposal.

With us, you choose a reliable and flexible partner for your transports. From planning and approval to transport execution, our team delivers everything from a single source. We are also happy to arrive in advance and examine the cargo to offer solutions tailored to your needs.

We run our warehouse conveniently located at the B401/B70/A31 road junction and in the immediate vicinity of GVZ Dörpen and the port of Papenburg.

The property is located in the industrial zone of Lehe, Emsland and is characterized by excellent infrastructure. Our workshops are designed for both long-term storage and short-term temporary storage, and also create ideal conditions for production.

We have our own fleet of forklifts, wheel loaders and trucks. The workshops are completely covered with cranes. Also outside surface is partly covered with cranes.

Alusteel Houseboat

Production and sale of houseboat

Our product is unique because we want it to become your dream come true. We deal with houses on water in a comprehensive way - from design to finished product.

In our design, we proffer some solutions, but we are open to adjust the design to your expectations. For the construction of hulls, we use the many years of work experience of G+K SteelCon, a company with a successful track record in the shipbuilding industry. The company has built many vessels ranging from fishing boats to mega-yachts.

Our water apartments are available in two variants - stationary and self-propelled.

Do you dream of an unusual shape or a specific layout of rooms? Contact us, tell us what you need and we will prepare an individual conceptual design, and after its approval - we will start building your house on water!
